

Lecture times and locations

- Tuesday 1200-1300 AM112
- Wednesday 1400-1500 AC203

Course lecturer

- Dr. Milovan Krnjajić
 office: 205 Aras de Brun
 email: milovan [dot] krnjajic [at] nuigalway [dot] ie phone: 091 49 2327
 office hours: open door policy and by appointment (e-mail)
 Tutorials: to be arranged

Course web page

- All information will be communicated through the Blackboard or in the class

Course description

The goal of the course is to introduce the main ideas and methods of stochastic models having in view applications to finance. Some of the topics are as follows:

- A review of probability theory: - discrete and continuous random variables (r.v.) - joint and conditional distributions - expectation, variance, sums of iid r.v.-s - conditional expectation - probability generating functions - moment generating functions
- Random sums of r.v.-s
- Branching processes
- Markov property
- Random walk with absorbing barriers (Gambler's ruin)
- Classification of states for a finite discrete Markov chain (MC)
- Stationary/invariant prob. distribution of a MC
- Absorbing MC; Random walk on R^d
- Mean first passage time
- Poisson process (independent increments formulation; inter-arrival times formulation)

Course work and examination

- Continuous assessment, including homework assignments and in-class tests, will be worth (about) 25% of the final mark. Examination will be according to the University rules and schedule.
