

# MA378 – Numerical Analysis II (NA2) 2016/2017

Niall Madden

March 29, 2017

|          |  |           |
|----------|--|-----------|
| <b>0</b> | <b>MA378: Introduction</b>                     | <b>3</b>  |
| 0.1      | Welcome! . . . . .                             | 3         |
| 0.1.3    | Topics . . . . .                               | 3         |
| 0.1.4    | What is NA2 really about? . . . . .            | 4         |
| 0.1.6    | Licensing . . . . .                            | 4         |
| <b>1</b> | <b>Polynomial Interpolation</b>                | <b>5</b>  |
| 1.1      | Introduction . . . . .                         | 5         |
| 1.1.1    | Polynomial Interpolation . . . . .             | 5         |
| 1.1.2    | Exercises . . . . .                            | 6         |
| 1.2      | Finding the polynomial . . . . .               | 7         |
| 1.2.2    | Uniqueness . . . . .                           | 7         |
| 1.2.4    | Lagrange Interpolation . . . . .               | 8         |
| 1.2.5    | The Lagrange Form . . . . .                    | 9         |
| 1.2.7    | Exercises . . . . .                            | 10        |
| 1.3      | Polynomial Interpolation Errors . . . . .      | 11        |
| 1.3.3    | Error estimates for $n \geq 1$ . . . . .       | 11        |
| 1.3.4    | Exercise . . . . .                             | 12        |
| 1.4      | Computing the polynomial interpolant . . . . . | 13        |
| 1.4.1    | Synthetic Division . . . . .                   | 13        |
| 1.4.2    | The Newton Form of the Interpolant . . . . .   | 13        |
| 1.4.3    | Exercise . . . . .                             | 14        |
| 1.5      | Hermite Interpolation . . . . .                | 15        |
| 1.5.2    | Constructing Hermite Interpolants . . . . .    | 15        |
| 1.5.3    | Exercises . . . . .                            | 16        |
| 1.6      | Wrap-up . . . . .                              | 17        |
| 1.6.1    | Convergence & Runge's Example . . . . .        | 17        |
| 1.7      | Where to from here? . . . . .                  | 17        |
| <b>2</b> | <b>Piecewise polynomial interpolation</b>      | <b>19</b> |
| 2.1      | Linear Interpolating Splines . . . . .         | 19        |
| 2.1.1    | Construction . . . . .                         | 19        |
| 2.1.2    | Analysis . . . . .                             | 19        |
| 2.1.3    | Best approximation . . . . .                   | 20        |
| 2.1.4    | Minimum Energy . . . . .                       | 21        |
| 2.1.5    | Exercises . . . . .                            | 21        |
| 2.2      | Cubic Splines . . . . .                        | 22        |
| 2.2.1    | Constructing Cubic Splines . . . . .           | 23        |
| 2.2.2    | A cubic spline example . . . . .               | 23        |
| 2.2.4    | Exercises . . . . .                            | 24        |
| 2.3      | Piecewise Hermite Interpolation . . . . .      | 25        |
| 2.3.1    | PCHIP . . . . .                                | 25        |

|          |  |           |
|----------|--|-----------|
| 2.3.2    | Estimating derivatives . . . . .                         | 26        |
| 2.3.3    | Exercises . . . . .                                      | 26        |
| <b>3</b> | <b>Numerical Integration</b>                             | <b>27</b> |
| 3.1      | Introduction . . . . .                                   | 27        |
| 3.1.1    | Newton-Cotes methods . . . . .                           | 27        |
| 3.1.2    | The Trapezium rule . . . . .                             | 27        |
| 3.1.3    | Exercises . . . . .                                      | 28        |
| 3.2      | Simpson's Rule . . . . .                                 | 29        |
| 3.2.1    | Newton-Cotes error estimates . . . . .                   | 29        |
| 3.2.2    | Exercises . . . . .                                      | 30        |
| 3.3      | Precision and Composition . . . . .                      | 31        |
| 3.3.1    | Precision . . . . .                                      | 31        |
| 3.3.2    | Composite Rules . . . . .                                | 32        |
| 3.3.3    | Exercises . . . . .                                      | 32        |
| 3.4      | Gaussian Quadrature . . . . .                            | 33        |
| 3.4.1    | Introduction . . . . .                                   | 33        |
| 3.4.2    | Undetermined Coefficients . . . . .                      | 33        |
| 3.4.3    | Exercises . . . . .                                      | 34        |
| 3.5      | Orthogonal Polynomials . . . . .                         | 35        |
| 3.5.1    | Inner products . . . . .                                 | 35        |
| 3.5.2    | A Sequence of Orthogonal Monic Polynomials . . . . .     | 35        |
| 3.5.3    | A sequence of orthogonal polynomials . . . . .           | 36        |
| 3.5.4    | Constructing the Sequence . . . . .                      | 36        |
| 3.5.5    | Properties of the sequence . . . . .                     | 37        |
| 3.5.6    | Exercises . . . . .                                      | 37        |
| 3.6      | Gaussian Quadrature via Orthogonal Polynomials . . . . . | 38        |
| 3.6.1    | Error estimates . . . . .                                | 38        |
| 3.6.2    | Convergence . . . . .                                    | 39        |
| 3.6.3    | Exercise . . . . .                                       | 39        |
| <b>4</b> | <b>Finite Element Methods for BVPs</b>                   | <b>40</b> |
| 4.1      | Boundary value problems . . . . .                        | 40        |
| 4.1.1    | Boundary value problems . . . . .                        | 40        |
| 4.1.2    | Exercises . . . . .                                      | 41        |
| 4.2      | The variational formulation . . . . .                    | 42        |
| 4.2.1    | The idea . . . . .                                       | 42        |
| 4.2.2    | Where the solution lives . . . . .                       | 42        |
| 4.2.3    | The variational/weak form . . . . .                      | 42        |
| 4.2.4    | Exercise . . . . .                                       | 43        |
| 4.3      | The FEM . . . . .  | 44        |
| 4.3.1    | On Infinite- and Finite-Dimensional Spaces . . . . .     | 44        |
| 4.3.2    | The Galerkin Basis Functions . . . . .                   | 44        |
| 4.3.3    | The Discrete Variational Form . . . . .                  | 44        |
| 4.3.4    | FE implementation . . . . .                              | 45        |
| 4.3.5    | Exercises . . . . .                                      | 46        |
| 4.4      | Error analysis . . . . .                                 | 47        |
| 4.4.1    | Cea's Lemma . . . . .                                    | 47        |
| 4.4.2    | An example . . . . .                                     | 47        |
| 4.4.3    | Exercises . . . . .                                      | 47        |
| 4.5      | FE Wrap-Up . . . . .                                     | 48        |
